Education

Cornell University — Ithaca, NY
B.A. Computer Science, Minors in Artificial Intelligence, Data Science | GPA: 3.7/4.0 — *Expected Graduation, May 2027*

- **Awards:** Y Combinator AI Startup School 2025 (1 of 2,500 selected), 4x Hackathon Winner

Experience

Google — Sunnyvale, CA
Software Engineer Intern, Cloud Knowledge Catalog — *May 2026 – Present*

- Delivered lightweight data profiling for BigQuery external tables and views across two backend microservices (Java/Go) in the Knowledge Catalog data governance platform, surfacing insights that ground Gemini Enterprise AI agents
- Extended the end-user API service to accept profiling requests for BigQuery external tables and views, adding type-aware validation and routing without breaking the existing API contract, rolled out behind Mendel feature flags
- Developed dynamic query-generation logic that selects profiling strategies by table format, applying TABLESAMPLE or a LIMIT fallback to avoid full-table scans, computing sampling rates from BigQuery-fetched row-counts

Amazon — New York, NY
Software Engineer Intern, Amazon Ads — *Sep 2025 – Dec 2025*

- Developed and owned asynchronous Java and Python backend services in a distributed AWS video ads processing pipeline handling 80K+ jobs weekly, designing fault-tolerant workflows across SQS, ECS, Lambda, DynamoDB, and S3
- Built a production AI microservice on AWS Bedrock with a two-stage VLM-to-LLM pipeline to perform multimodal video analysis on video ads, generating titles/descriptions that outperformed advertiser-supplied text in 98% of cases
- Integrated a video assembly service into the pipeline by building a Lambda-triggered ECS execution path and S3/DynamoDB asset storage, enabling secure cross-account and cross-service access of final video assets

Tesla — Fremont, CA
Software Engineer Intern, Charging Team — *May 2025 – Sep 2025*

- Developed scalable REST API endpoints in the Tesla Mobile App backend with Node.js, Express.js, and TypeScript, orchestrating vehicle/charging microservice calls to power real-time user-visible data for 3.4M daily users
- Implemented a Redis caching layer to store Spark API responses for supercharger congestion/pricing data, reducing redundant upstream microservice calls and improving Tesla Mobile App response latency by 10%
- Developed an agentic AI QA assistant with Python that automated mobile app test-account setup (e.g. region switching, vehicle linking) via orchestrated microservice API calls, improving QA throughput by 25%

Flow — Remote
Software Engineer Intern — *Jan 2024 – May 2024*

- Developed REST APIs using Flask and Python to retrieve and process data from Flow's AI models, automating customer prospecting and increasing sales representative call volume by 300% (30 → 120 calls/day)
- Reduced application latency by 15% by optimizing PostgreSQL queries; replaced nested SELECTs with JOINs, added B-tree indexes on high-cardinality columns, and batched execution to minimize database calls
- Integrated backend services into CI/CD pipelines using GitHub Actions, ensuring automated testing and deployment

Projects

ElectAI | *Python, Scikit-learn, Flask, React, TypeScript, TailwindCSS, NumPy, Pandas* — Jan 2025

- Engineered a full-stack ML web app to predict voter turnout using historical behavioral data patterns to model participation likelihood using a Flask REST API to retrieve data from the model and a React frontend
- Built a data preprocessing pipeline with Python, NumPy, and Pandas to clean 20 years of election data, enabling accurate regression modeling with Scikit-learn and achieving high accuracy (RMSE: 5.35, MAE: 4.22)

Technical Skills

Languages: Java, Go, Python, C, C++, TypeScript, JavaScript, SQL
Frameworks: Flask, FastAPI, Node.js, Express.js, React, Next.js
Cloud/Infrastructure: AWS, Redis, PostgreSQL, Docker, Github Actions, CI/CD
Libraries/Tools: Scikit-learn, NumPy, Pandas, OpenAI API, TailwindCSS, Git, Postman
